Professional Summary

Computer Science Engineering student with hands-on experience building data-driven web applications and AI-powered systems. Proficient in Python, Django, MySQL, and computer vision tools including OpenCV and YOLO. Demonstrated ability to design adaptive, real-world solutions through project work in intelligent traffic management and healthcare data systems. Seeking a role in a product-focused team where structured thinking and technical execution create measurable impact.

Education

Dr. T Thimmaiah Institute of Technology

Bengaluru, Karnataka

Bachelor of Engineering in Computer Science and Engineering

Expected 2026

Technical Skills

Languages: Python, C, SQL

Web Technologies: Django, HTML, CSS

Computer Vision & AI: OpenCV, YOLO (object detection)

Database: MySQL

Tools & Platforms: GitHub, MS Excel

Core Concepts: Object-Oriented Programming, REST APIs, CRUD Operations, Modular Architecture, Role-Based Authentication

Professional Experience

QSpiders

Bengaluru, Karnataka

Python Full Stack Intern

2026 – Present

- Built and deployed scalable web applications using **Django**, following modular MVC architecture for clean separation of concerns.
- Designed and optimized **MySQL** database schemas; implemented structured CRUD operations for efficient data management.
- Applied **object-oriented programming** principles to produce maintainable, reusable code across backend modules.
- Developed responsive, user-friendly frontend interfaces using **HTML and CSS**.
- Managed collaborative version control workflows using **GitHub**, including branching and pull request reviews.

Projects

🚦 **AI-Based Traffic Light Automation System**

- Engineered a real-time **vehicle density detection system** using **OpenCV and YOLO**, capable of identifying and classifying vehicles from live camera feeds.
- Designed an **adaptive signal control algorithm** that dynamically adjusts traffic light timings based on lane-wise congestion patterns, reducing wait times over fixed-time systems.
- Demonstrated practical application of computer vision in solving urban infrastructure challenges.

🩸 **Blood Bank Management System**

- Developed a secure, web-based donor and recipient management platform using **Django**, with full CRUD functionality for blood inventory operations.
- Implemented **role-based authentication** to ensure controlled access for admins, donors, and hospital staff.
- Structured database models in **MySQL** to enable accurate blood stock tracking, expiry management, and demand forecasting.
